Screen Sharing Feature Pack

Simple, fast screen sharing to anyone on any device

CounterPath's Screen Sharing Feature Pack is an add-on service for Bria for desktop softphones that enables users to quickly and easily show their screen with a single click of the mouse. Visually engage co-workers or customers on their computer, tablet or smartphone with no additional downloads, plug-ins, Flash or Java needed on their end.

The Screen Sharing Service provides a cost-effective, scalable and easy to use softphone add-on that is targeted to enterprises, as well as small and medium sized businesses. When used in the Bria Desktop Edition for Windows client, presenters can share their screen with up to 100 participants while using the voice and messaging capabilities of their desktop softphone.

Initiating a Screen Share

Presenters can start sharing their screen with a simple click of their mouse! CounterPath's Screen Sharing Service gives presenters multiple convenient ways to launch a screen share from their Bria desktop softphone. Escalate an IM conversation or phone call to a screen share, send an invitation in an email, or even broadcast an IM to a group of people to invite them to a session.

Dedicated Meeting Rooms

Unlike most screen sharing solutions, CounterPath's Screen Sharing Service provides each subscriber with a dedicated virtual meeting room. This gives them the convenience of scheduling meetings on the fly, or recurring meetings, without having to specifically reserve a meeting room.

Advanced Security

CounterPath's Screen Sharing Service is designed to meet the even the most stringent security requirements of finance and health care verticals. All screen sharing sessions are encrypted via HTTPS, which encrypts all of the data sent to the screen share participants.

Reporting Tools

CounterPath's Screen Sharing Service also comes with a Reporting Portal for administrators. This allows them to see results on the number of sessions initiated, who initiated them, and the number and names of the participants in a screen share session.

User Benefits

- Enhance productivity and effectiveness during calls and conference calls by getting everyone on the same page during a screen share
- Increase audience engagement during virtual meetings by showing and telling during your presentation
- Mobile access allows participants to join easily from any device without needing additional downloads, plug-ins, Flash or Java.

Enterprise Benefits

- Provide employees with a powerful tool to increase productivity and effectiveness during virtual meetings and conference calls
- Utilize reporting tools to see how often employees are using the service and which attendees are joining sessions
- Cloud-based service means no onsite installs or proxies to get set up
