X-Lite for Windows and Mac

Releases

This document provides information for the following X-Lite[®] Releases:

- [5.0.2](#) released September 6, 2017 (Mac only)
- [5.0.1](#) released August 8, 2017

System requirements

Windows

- Windows 7
- Windows 8.1
- Windows 10

For Windows 10, installing the Creators update is recommended. To check if your computer has the Creators update, go to **Settings > System > About** and check the **Version**. The version should be 1703 or higher.

X-Lite supports Windows-based 2-in-1 laptops. You can enjoy using X-Lite both on desktop mode and tablet mode. For 2-in-1 tablet support, devices must be run with at least Windows 10 with Anniversary update. To check if your computer has the Anniversary update, go to **Settings > System > About** and check the Version. The version should be 1607 or higher. Make sure you enable **Settings > Devices > Typing > Touch Keyboard** and select **Show the touch keyboard when not in tablet mode** and **There's no keyboard attached**.

Prerequisites for Windows MSI Install are:

- [Microsoft .Net 4.6.2](#)

Mac

- Sierra / OS X 10.12
- El Capitan / OS X 10.11

X-Lite 5.0.2 (September 6, 2017)

New features in 5.0.2

Previous versions of X-Lite are not compatible with macOS High Sierra (10.13) and will fail to launch. To continue using X-Lite, you need to upgrade to version 5.0.2. This update should be installed before installing High Sierra. To update, go to **Help > Check for Updates**. The **Auto Upgrade** window opens.

If you upgrade to High Sierra prior to updating to 5.0.2, you will need to manually update X-Lite. To download X-Lite 5.0.2 for Mac, please visit <http://www.counterpath.com/x-lite/>.

NOTE: If you upgrade to macOS High Sierra (10.13), you will not be able to continue using X-Lite without upgrading to version 5.0.2.

Known issues in 5.0.2

Unable to type while IM notification is present (Mac only)

When you receive an IM and click an IM notification, the Messages window appears. You should be able to start typing right away. If you receive multiple IMs at once, you cannot start typing until all of the IM notifications disappear. No issue has been found when receiving only one IM. This is because IM toasts take the focus away from the Messages window.

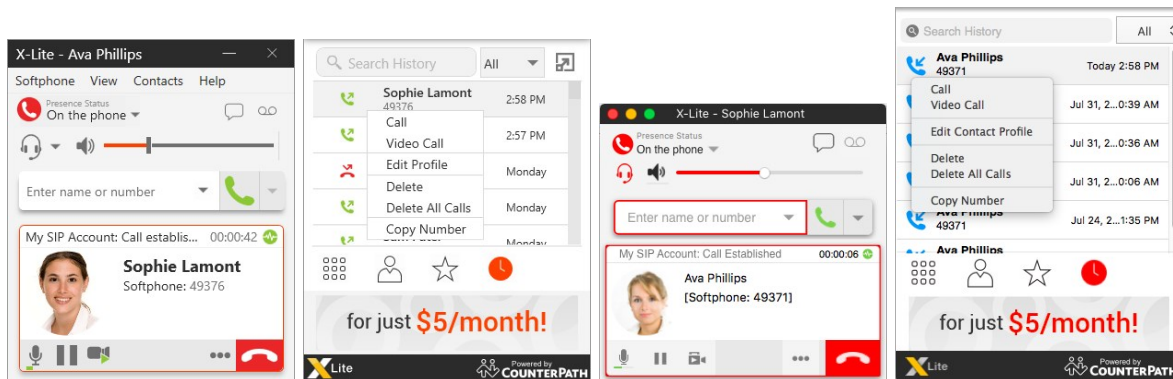

Workaround: Explicitly click the text area in the Messages window where you want to type.

X-Lite 5.0.1 (August 8, 2017)

New features in 5.0.1

UI refresh

X-Lite now has an updated look. Some improvements include updates to the call panel and the ability to copy phone numbers from call history.

Improved installer

X-Lite uses a simplified and streamlined installation process. X-Lite launches immediately after the installation.

IM phone number parsing

If you receive an IM with a phone number in it, you can click on the number in the message and X-Lite will place a call to that number.

Hyperlink preview

When you receive an instant message with a hyperlink in it, you will see a preview of the hyperlink in the message.

Expected behavior in 5.0.1

Upgrading to Windows 10 (Windows 10)

After upgrading to Windows 10, you may find that your audio devices/sound have stopped working on X-Lite. This is due to the audio device changes in Windows 10. If you see this issue, open X-Lite and configure your device from **Softphone > Preferences > Devices**. For more details, visit the [CounterPath website](#).

AES

This product includes software copyright (C) Mok-Kong Shen 2003. <http://mok-kong-shen.de/>
(mok-kong.shen@t-online.de)

The original software has been revised.

Free license:

This work and all modified versions of it may be freely copied, modified, redistributed and used for all legal civilian purposes without formality albeit at licensee's own risk and responsibility, subject to the following conditions:

- (1) A copy of this copyright notice with the release history list and the site modification history list must be included in any copy of this work or any modified version of it.
- (2) If this work or any modified version of it forms part of a software in object code or binary code, a document for users should accompany the software stating this fact and include this copyright notice as well as an URL of the licensee where the source code of the package in the version actually being used in the software can be found.
- (3) Any modification (except dropping of the Supplement) should be appropriately documented in the site modification history list below. The last date of site modification (at the beginning of the package) is to be updated.
- (4) In case of non-trivial modifications, i.e. those stemming from efficiency or correctness considerations or from issues of interoperability with other AES implementations, a copy of the modified package is to be immediately sent to the copyright owner at the address above.
- (5) Eventual negative or unfavourable consequences and losses or damages of any form to any persons in connection with the use of this work or its modified versions do not constitute any liabilities on the part of the copyright owner.

This free license is unlimited in time [1]. Any attempt of non-compliance with the above terms or any occurrence of // their practical unsatisfiability due to whatever reasons, however, automatically terminates the license. Such termination does not affect other licensees who have previously

obtained materials from the person with the terminated license but who continue to comply with the above terms.

Other licenses:

Any usages of the contents of the package that don't qualify for a free license as stated in the above require explicit // specific licenses from the copyright owner.

[1] Since copyright grants could be revoked after 35 years (see <http://www.copyright.gov/title17/92chap2.html#203>), it // could be argued that this license is not timeless for sure. On the other hand, the lifespan of AES itself isn't likely to exceed that period. So the issue is not practically relevant in our context.
