## DATA SHEET

# Skype for Business Feature Pack

### Key Features

- Integrate Skype for Business contacts and presence with a high quality communications and collaboration application
- HD audio and 1080p video calling leveraging your existing PBX
- Microsoft Office integration with presence and click to call within Outlook
- Optional Stretto™ Collaboration service for HD video conferencing and screen sharing can be integrated within the Bria softphone experience

### Key Benefits

- Make superior quality voice and video calls with Bria while still integrating Skype for Business messaging and presence
- See all of your contacts and presence status in one place to streamline communications
- Realize enhanced productivity and collaboration by seeing presence status across all contacts

### Overview

CounterPath's Skype for Business Feature Pack brings you the power of CounterPath's Bria Windows Desktop softphone - enabling superior quality enterprise voice and video calling - with Skype for Business' messaging and presence support. Available as a branding option for purchases of over 200 Bria licenses, the Skype for Business Feature Pack streamlines all communications in one, easy to navigate interface and promotes enhanced productivity and collaboration with contacts and colleagues.

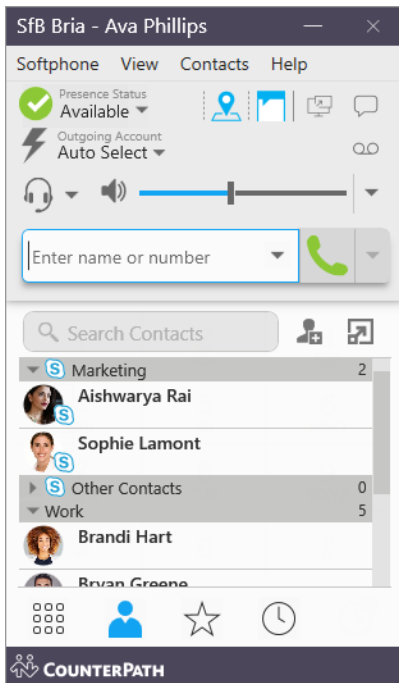

Additionally, the Skype for Business Feature Pack can be enhanced with an optional hosted Screen Share service or Stretto™ Collaboration services from CounterPath, enabling users to share their screen with any one on any device or host HD video conferences with up to 200 participants.

### Superior Voice and Video Calls with Bria

Bria includes a wide range of audio and video codecs to facilitate crystal clear audio and HD video calling over any network. With a variety of call control options, users can easily transfer, merge, split, forward and hold calls, as well as record to local or cloud-based storage.

### Messaging, Presence and Contacts in One Place

See Skype for Business contact presence in real-time and send message from within Bria without the need to switch applications. Plus, with enhanced contact management, easily identify which contacts are utilizing Skype for Business with a Skype logo overlay on their avatar, and create and manage groups for Skype and locally saved contacts.

### Microsoft Office Integration

Bria also includes Microsoft Office integration, enabling users to sync their Microsoft Outlook address book and make voice and video calls over IP directly from Outlook. When sending an email, users can see if recipients are available, on the phone or simply offline. This increases productivity, as there is no switching between applications to call or send an instant message.

### Enhanced Interoperability & Deployment Options

Built on SIP and open standards, Bria has proven interoperability with many of the industry's standard platforms and devices, including Avaya, Asterisk, Cisco, FreePBX, Mitel and others. Bria also includes features specifically designed for business and enterprise users, and can be deployed within an enterprise environment either by manual configuration or by using the Provisioning Module of CounterPath's Stretto Platform™.

### Video, Audio and Web Conferencing Service Add-On

Bria can also be enhanced with CounterPath's Stretto™ Collaboration service, which adds a dedicated virtual meeting room for HD video and audio conferencing with up to 200 participants – including those outside of your organization. With feature-rich presenter capabilities, meetings can include 1080p video, high quality audio, and integrated screen sharing and messaging, all in one window. Plus, with the ability for participants to join via web browser, hosting large meeting with anyone, anywhere, and on any device couldn't be easier.
