Release Notes for CounterPath Bria 4 *for Mac* Version 4.5

July 26, 2016

This document applies to:

Retail client: The yellow client with perpetual license.

SaaS client: The red "Bria Stretto™" client with cloud subscription to CounterPath Stretto.

Branded client: Customized softphone clients.

The softphone client type is identified for each of the features listed in this document.

1 Versions

This document covers the following versions of Bria:

- 4.5.0 released on July 7, 2016
- 4.4.0 released on March 21, 2016
- 4.3.1 released on December 14, 2015
- 4.3.0 released on November 25, 2015

2 System Requirements

CounterPath supports the two most recent OS X releases:

- El Capitan / OS X 10.11
- Yosemite / OS X 10.10

3 Bria 4.5.0 (July 7, 2016)

3.1 New in 4.5.0

Salesforce Add-In Support

This version supports integration with CounterPath's Salesforce Add-In. With the Bria for Salesforce Add-In, Bria can be used to make calls directly from your Salesforce setup. It also provides a variety of reports on call-related activities. For more information, contact your CounterPath Sales Rep or visit www.counterpath.com/bria-for-salesforce.

System Default Device

Bria now offers an option to use the user's system default device for microphone and speaker. This eliminates the need for the user to change the device selection within Bria every time they connect a device to their computer. Bria now can be configured to automatically select the default device set in the operating system. (I-3506)

- On fresh install of Bria, it uses your system default device.
- On upgrade from previous versions of Bria, it remembers your selection and does not change the device choice. To take advantage of system default devices, change the selection from Preferences > Devices > Headset Mode or Speakerphone Mode. Each mode has a selection for microphone and speaker.

New Additions to Bria Desktop API

There are new APIs introduced for unattended (basic) transfer and call recording. Also an option has been added to some APIs to instruct the Bria main window to stay in the background instead of coming to the foreground. Refer to the Bria Desktop API Release Notes for details. (I-3711)

Target Bitrate for Video Quality

Bria now captures the current bitrate for an active video call based on the feedback from the remote party. This helps users figure out why video quality is not as high as they might expect.

The target bitrate is displayed under Help > Troubleshooting > Video. (I-2786)

Crash Uploader ID

In case of crash, Bria assigns a unique ID to the generated crash dump and presents the ID to the user for better troubleshooting. Please include the ID when communicating with Technical Support. (I-3270)

Presence Agent

The presence agent can be configured for Bria Retail and SaaS clients. For retail clients, go to Account Settings > Presence and pick the presence agent. For SaaS clients, the admin can change the attribute on Stretto Admin web interface. (I-3697)

Support for TLS Version 1.2

Bria now supports TLS version 1.2. By default, Bria uses the highest negotiated version between Bria and the server from SSL V3 to TLS V1.2.

For branded customers, the TLS version is provisionable per account. Use the following setting to provision the TLS version. The data type is integer: SSL_V3 = 2, TLS_V1_0 = 3, TLS_V1_1 = 4, TLS_V1_2 = 5, and SSL_HIGHEST = 1000 (default). (I-3508)

```
proxies:proxyN:ssl_version = 1000
```

Enabling/Disabling the Use of SIP rinstance via Provisioning

By provisioning, customers can choose to add or remove the SIP rinstance parameter in the SIP Contact header. This setting aims to provide better interoperability with some SIP servers.

```
proxies:proxyN:use_rinstance = true
```

This setting is enabled (set to true) by default; the rinstance parameter is added to the Contact header. (I-4150)

Brandable URLs for the About Window

Branded customers can optionally add URLs to the About window. When the URL is clicked, Bria opens the page in a default browser. The labels/hyperlink texts and the URLs must be provided to CounterPath along with a request for a custom build. (I-3344)

3.2 Improvements

Group Chat Enhancements

There are various improvements and changes for group chat. (I-3454/S-2527)

- Clear and easy way to start a chat - only one single icon for starting a chat whether it is one-on-one or group chat. With this change, the broadcast IM functionality has been removed to avoid confusion.
- Ability to add people to a group chat anytime (not only at the beginning)
- Ability to re-invite participants who have left the group chat
- Ability to "revive" a closed group chat that you have left
- Clear indication when someone has left the group chat (displayed with strikethrough text)

Plantronics Headsets Support

There have been improvements in integrating the Plantronics API with Bria. This version of Bria requires the Plantronics Hub software installed on the user's computer. These improvements aim to provide better and wider support for Plantronics devices. Visit [our website](#) for a list of supported devices and detailed notes. (I-3430)

New Look for the Login & About Windows

The Login and About windows get a new look in this version. Some of the icons in Bria are also updated.

Branded customers can optionally provide a new custom graphic for the Login and About windows. (I-3400, I-3402)

Requirements for the new custom graphic:

- The file must be in PNG format.
- 72 dpi.
- Width must be 350px.
- Height: up to customer. The window will stretch to show the entire image. The Bria clients use 178px for height.

Number of Entries in Call History

The call history entries have been reduced from 500 to 50. After upgrading to Bria 4.5.0, you will only see the most recent 50 entries. (I-3112)

Click Behavior on Call History

Previously a double click on call history brought up a history flyout. Now the following behavior has been implemented on Call history entry:

- Single click opens a history flyout
- Double click places call

The updated behavior matches closely with the click behavior on the Contacts list. (S-2601)

Updated OpenSSL

This version of Bria uses OpenSSL 1.0.1t. (O-2689)

3.3 Resolved Issues in 4.5.0

Reinstated Macro Support for \$MAC\$ and \$IP\$

The \$MAC\$ and \$IP\$ macros didn't work in Bria 4.2+ versions. This issue has been solved. (I-3967/S-2984)

VP8 Video Codec Dynamic Payload Type

Bria did not dynamically update the payload type after the other party changed the payload type via re-INVITE. This issue has been resolved. (I-3619)

3.4 Known Issues

Jabra Headsets for Syncing Volume Control

The volume up/down button on Jabra headsets controls the volume as intended when connected through USB. However, when changing the volume on headsets, only the system indicator is synced, displaying the correct volume, but not the volume indicator inside the Bria client.

Unable to Type While IM Toast is Present

When you receive an IM and click an IM toast, the Messages window appears. You should be able to start typing right away. In 4.3.0, you cannot do that until all the IM toasts disappear if you receive multiple IMs at once. No issue has been found when receiving only one IM. This is because IM toasts take the focus away from the Messages window.

Workaround: explicitly click the text area in the Messages window where you want to type. (S-1815)

Auto Gain Control

The Auto Gain Control setting under Preferences might not control the gain as intended under some circumstances. (S-953)

4 Bria 4.4.0 (March 21, 2016)

4.1 New and Changed Features in 4.4.0

Color Emoji Support

This version offers color emojis and a greater variety of emoticons, resulting in an improved UI experience.

Headset/Speakerphone Device Selection

From the dropdown menu on the main window, you can:

- view the currently selected mode.
- toggle between Headset mode or Speakerphone mode.
- tap Device Settings to go to Preferences> Devices tab to configure the devices.

Network Quality Indicator

The Network Quality Indicator on the call panel displays the Wi-Fi and mobile network performance as:

Video Controls Enhancements

New enhanced controls on the video windows provides the ability to view, change and select more options while previewing your video or while you're in a video call. These controls are visible when the mouse is moving or active over the video window and are hidden after a reasonable amount of inactive mouse time.

The video window controls include (from left to right):

Icon	Description
Full screen	Enter and exit full screen.
Camera settings	Display or select: <ul style="list-style-type: none"> • Camera • Max Resolution: <ul style="list-style-type: none"> • Low resolution • Standard • High resolution • HD widescreen
Video Information	Display: <ul style="list-style-type: none"> • Remote video size • Remote video framerate • Local video size • Local video framerate
Mute microphone	Mute and unmute the microphone.
Start/stop video	Start or stop sending your video.
End call	End your video call.

Broadworks SIP Extension Enhancements

Bria 4.4 provides the third party, primarily in call centre environments, with the ability to answer or hold calls. You can select or clear the check boxes by going to Preferences > Calls.

Enable third party call control support for:

- Answer/resume (talk)
- Hold/resume (hold)

User Experience Metrics (UEM) Enabled for Stretto Platform™

The UEM module encompasses both analytics and Voice Quality Monitoring features, which provide operations staff with valuable insight into end user behaviors and experiences. The UEM module collects data from Bria clients and can export to Excel or display it as a chart or graph within the Stretto Admin web interface.

Announcements Tab

The option for an Announcement tab has been added to Bria clients in the form of a web tab accessible from the tab bar. These “Announcements” will only be:

- used to communicate important product or service-related information to users.
- displayed when a message is available.

Dismiss messages once they are viewed and/or remove the Announcements tab from the tab bar by going to View > Hide Announcements.

4.2 Resolved Issues in 4.4.0

Bria 4.4.0 contains improvements in the stability of Bria, and miscellaneous bug fixes related to SIP registration, LDAP, Mac Address Book, and IPv6.

5 Bria 4.3.1 (December 14, 2015)

5.1 Changed Features in 4.3.1

Number of Entries in Call History

Bria now shows 500 call entries maximum in the call history. If you have more than 500 call entries, you will only see the most recent 500 after upgrade.

5.2 Resolved Issues in 4.3.1

Bria 4.3.1 contains various bug fixes and the improvements in the stability of Bria, including:

- an issue that Bria does not update the call history correctly
- a performance issue with a long call history

6 Bria 4.3.0 (November 25, 2015)

6.1 New and Changed in Bria 4.3.0

Conference Call Recording

Conference calls can be recorded using Bria. If a conference call is a video call, only the audio portion of the call will be recorded. (I-2292/S-1658)

Setting Primary Number in XMPP VCard with PREF Tag

If you have access to XMPP VCard configuration on the XMPP server, you can set a PREF tag for a specific number to be used as a primary phone number on Bria. For example, if a contact has 3 numbers - home, work and mobile, you can set the work number as primary by adding a PREF tag in VCard configuration. When end users double-click the contact, the primary number will be called. (I-2301, S-1684)

```
...
<TEL>
  <PREF/>
  <WORK/>
  <VOICE/>
  <NUMBER>6045551234</NUMBER>
</TEL>
<TEL>
  <HOME/>
  <VOICE/>
  <NUMBER>6045559999</NUMBER>
</TEL>
<TEL>
  <CELL/>
  <VOICE/>
  <NUMBER>7785551234</NUMBER>
</TEL>
...
```

Verify TLS Certificate on GUI

The setting for verifying a TLS certificate is now available on GUI. This is a per account setting, configurable for each SIP and XMPP account. Go to Account Settings > SIP/XMPP account > Transport. (I-2497)

SIP Outbound Settings on GUI

A new setting has been added under Account Settings > SIP Account > Advanced. (I-2100, S-1571)

- Added: Use SIP Outbound.
When on, Bria uses an existing connection by populating the SIP header as specified in RFC 5626.
- Name change: Force outbound proxy on all requests (previously called "Use Outbound")
When on, Bria will route all outgoing calls through the outbound proxy; in other words it will never send the invite directly to the endpoint but always to the proxy.

Call Continuity - Hand Over an Ongoing Call to Mobile

With this feature, end users can hand over an ongoing call from Desktop to Mobile, or vice versa. If you are on a call using a desktop computer, and need to leave the office, for example, you can pull the call from a mobile device and continue with the call while walking out of the building. It can be between Windows and Mac; you can answer a call on Windows and move it to a Mac laptop. You can pull a call from any Bria-enabled device as long as you are registered to the same SIP account that supports this feature.

This feature requires the Call Continuity Module on the Stretto Platform for call anchoring. Talk to your sales representative about the Call Continuity Module.

6.2 Resolved Issues in Bria 4.3.0

Attended Transfers with Asterisk VoIP System

Asterisk users have reported that when transferring a call using "Call First", the recipient of the transfer hears the music on hold.

Bria 4.3.0 includes a change that aims to address the issue. Bria 4.3.0 does *not* put a call on hold before attended transfer, which will hopefully prevent the music to be played for transfer. (O-1795/I-2053)

Call Forwarding after Upgrade from 4.1.1

After upgrading Bria 4.1.1 to 4.2.1, the call forwarding settings are not carried over to 4.2.1; The Call Forwarding feature is disabled regardless of the previous setting and no number is saved from the previous version. This problem has been resolved. (S-1615)

7 Third-party Software Notices

AES

This product includes software copyright (C) Mok-Kong Shen 2003. <http://www.mokkong-shen.privat.t-online.de/>

The original software has been revised. A copy of the revised package is available at forums.counterpath.com.

Ares

This product includes software Copyright 1998 by the Massachusetts Institute of Technology.

Permission to use, copy, modify, and distribute this software and its documentation for any purpose and without fee is hereby granted, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation, and that the name of M.I.T. not be used in advertising or publicity pertaining to distribution of the software without specific, written prior permission.

M.I.T. makes no representations about the suitability of this software for any purpose. It is provided "as is" without express or implied warranty.

Boost

This product includes software based on the Boost Software License. All Rights Reserved.

Boost Software License - Version 1.0 - August 17th, 2003

Permission is hereby granted, free of charge, to any person or organization obtaining a copy of the software and accompanying documentation covered by this license (the "Software") to use, reproduce, display, distribute, execute, and transmit the Software, and to prepare derivative works of the Software, and to permit third-parties to whom the Software is furnished to do so, all subject to the following:

Original SSLeay License

/ Copyright (C) 1995-1998 Eric Young (eay@cryptsoft.com)

All rights reserved.

This package is an SSL implementation written by Eric Young (eay@cryptsoft.com).

The implementation was written so as to conform with Netscapes SSL.

This library is free for commercial and non-commercial use as long as the following conditions are aheared to. The following conditions apply to all code found in this distribution, be it the RC4, RSA, lhash, DES, etc., code; not just the SSL code. The SSL documentation included with this distribution is covered by the same copyright terms except that the holder is Tim Hudson (tjh@cryptsoft.com).

Copyright remains Eric Young's, and as such any Copyright notices in the code are not to be removed. If this package is used in a product, Eric Young should be given attribution as the author of the parts of the library used. This can be in the form of a textual message at program startup or in documentation (online or textual) provided with the package.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the copyright notice, this list of conditions and the following disclaimer.
2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
3. All advertising materials mentioning features or use of this software must display the following acknowledgement:
"This product includes cryptographic software written by Eric Young (eay@cryptsoft.com)"

The word 'cryptographic' can be left out if the routines from the library being used are not cryptographic related :-).

4. If you include any Windows specific code (or a derivative thereof) from the apps directory (application code) you must include an acknowledgement:

"This product includes software written by Tim Hudson (tjh@cryptsoft.com)"

THIS SOFTWARE IS PROVIDED BY ERIC YOUNG "AS IS ", AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE AUTHOR OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

The licence and distribution terms for any publically available version or derivative of this code cannot be changed. i.e. this code cannot simply be copied and put under another distribution licence [including the GNU Public Licence.]
